

FCC,

I am strongly apposed to petition 04-160 formed by the NAB(National Association of Broadcasters) which bears down on what Satellite Radio can offer. It is not up to the goverment to decide whether I can hear traffic updates, news, weather, or any other form on informative listening on my radio. This is my right, and I pay the taxes on my service every month, as I did with the equiptment I bought. Instead of deciding whether you will limit what technology I can use, why don't you worry about more important issues. I think it is definitely fair to say that if the NAB wants to make an issue of this, why do they not bother to compete? Instead of trying to increase their services, they want to look to the FCC to be the "Big Brother" and step in and eliminate any competition they may have. I think this is utterly ridiculous and you have no business interrupting these services.
